

ANDERSON BREMER PAPER COMPANY

(A DIVISION OF THE ANDWIN CORPORATION)

FOR OVER 50 YEARS, **ANDERSON-BREMER** HAS BEEN PROVIDING BUSINESSES WITH PRODUCTS FOR PACKAGING AND SHIPPING IN ADDITION TO GENERAL SUPPLIES.

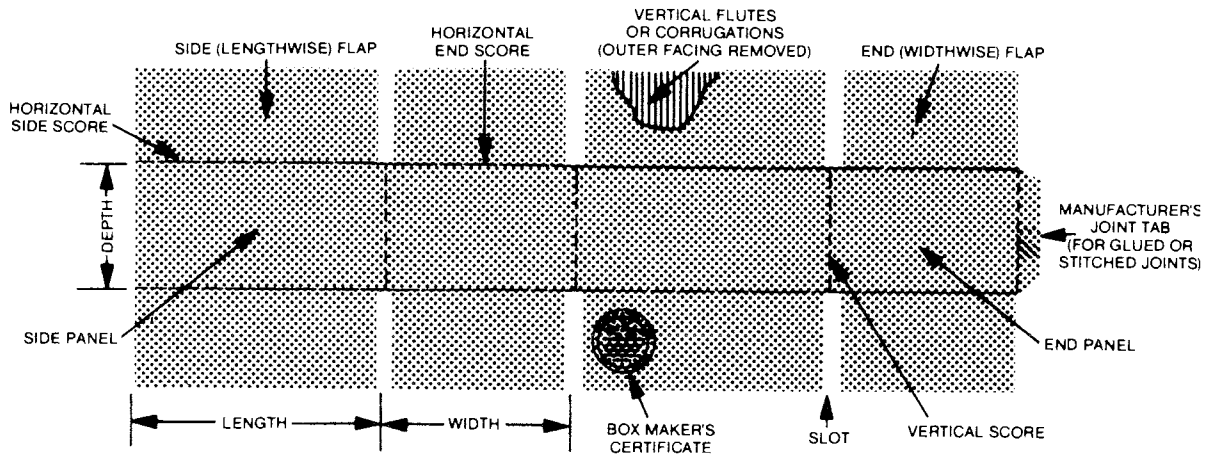

OUR CONTINUED SUCCESS LIES IN OUR ABILITY TO CONSISTENTLY SATISFY OUR CUSTOMERS WITH THESE IMPORTANT BENEFITS:

- ◆ **EXPERIENCE:** *Our experienced sales staff are a great asset to our customers. The inside sales team combined with our outside Sales Representatives are available to offer you personal service tailored to your individual needs.*
- ◆ **PRODUCT RANGE:** *All of your **packaging, shipping room, janitorial, stationery and food service** needs can be handled with one simple phone call.*
- ◆ **DELIVERY:** *Our fleet of trucks afford us the ability of next day delivery on most stock items.*
- ◆ **VALUE:** *Competitive pricing combined with highly trained customer service personnel and a wide range of products provides our customers the Value they are expecting.*

HOW TO MEASURE CORRUGATED BOXES

Blank for an RSC (Regular Slotted Container) Style Box

BOX DIMENSIONS

Box dimensions are always **inside dimensions** and must be stated in the **sequence of length, width and depth**.

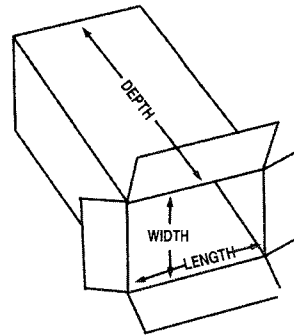

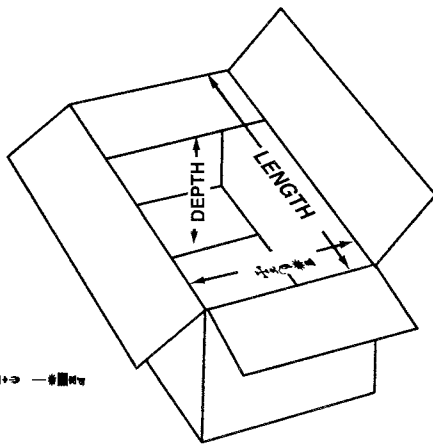

The length is the larger of the two dimensions of the open face (flap opening); the width is the smaller. The depth is always the distance measured perpendicular to the length and width between the innermost surfaces of the box. Even so-called "end-opening" or "end-loading" boxes follow the above principles. Thus, the depth is still the dimension between the innermost surfaces of the box measured perpendicular to the length and width.

To properly measure a corrugated box, score to score measurements should be taken for each dimension. Since, when describing a corrugated box the inside dimensions (or usable carton capacity) is considered, predetermined deductions from score to score measurements must be made to arrive at the true box size. Board flute, being of variable thickness, requires that each flute have its own set of score to score measurement deductions, as follows:

ALLOWANCES FOR RSC BOXES

FLUTE	L	W	D
B	1/8"	1/8"	1/4"
C	3/16"	3/16"	3/8"
A	1/4"	1/4"	1/2"

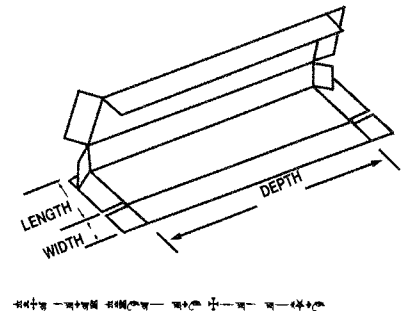

NOTE: Always measure panels not adjacent to the tape or glue joint. Measure from center of score to center of score.

OTHER DIMENSIONS

Tubes and folders follow the same sequence used for boxes in determining dimensions. **Length, width and depth are listed, in that order**, with length being the larger of the two dimensions of the open face, and width the smaller.

Pads, liners, partition pieces, die-cut pads, scored blanks and sheets of corrugated or solid fiberboard, with only two dimensions, have their size specified with the **first dimension parallel to the corrugations**, or perpendicular to the grain of solid fiberboard.

Corrugated Box Styles

Box Styles

Many styles available. Some box styles are applicable to only certain products and have highly specialized features; others are more general. No attempt can be made to show every style of box—only those in most common use.

Measuring Boxes

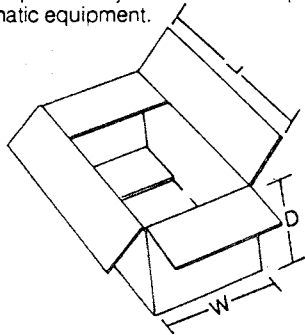

When ordering boxes, the inside dimensions should always be stated in order of length, width and depth. Even when the box is to have interior packing, the dimensions given should be the inside dimensions of the box irrespective of the interior packing.

The length is the larger of the two dimensions of the open face; the width is the lesser. The depth is the distance between the innermost surfaces of the box measured perpendicular to the length and width.

A tight fit is important for safe transportation and the box manufacturer is better able to design a box of the proper size if he is furnished with a sample of the article to be packed.

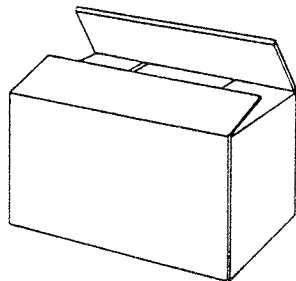

If it is not practicable to submit a sample, a complete description of the article, including drawings when available, the quantity to be packed, and the weight to be shipped in the box should be supplied to insure that the box which is designed will comply with the carriers' specifications.

Box dimensions are particularly critical when the product is to be packed with automatic equipment.

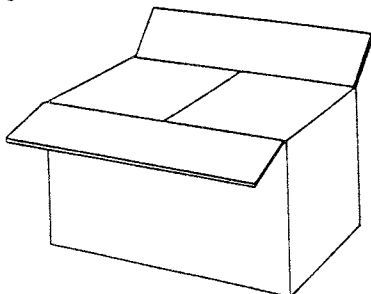

Regular Slotted Container—RSC

All flaps same length. Outer flaps meet. Regular Slotted Boxes are in more general use than any other style because they are the most economical to manufacture and use.

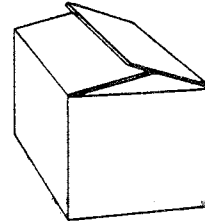

All Flaps Meet—AFM

Inner and outer flaps meet at the center. Similar to a regular slotted box except that it is stronger at the top and bottom due to the double thickness of corrugated board in these areas.

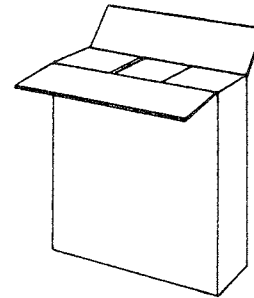

Partial Overlap Slotted Container—POL

All flaps same length. Outer flaps overlap specified amount but not less than 1 inch. The inner flaps do not meet. The box is easily closed, usually with staples driven through the overlap area.

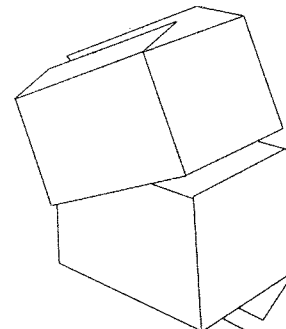

Full Overlap Slotted Container—FOL

All flaps same length. Outer flaps overlap not less than inside width of box minus a maximum of 1 inch. When this style box is stacked on its side panel, the extra thickness of corrugated board on the top and bottom panels provide stacking strength. The outer flaps, which almost completely overlap, make this box unusually resistant to rough handling.

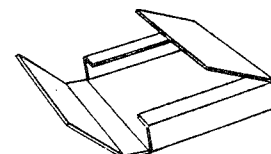

Half Slotted Carton (HSC) and Full Telescope Half Slotted Box (FTHS)

Single HSC is a slotted box with one set of flaps only. Used as a "slip cover" for batteries, refrigerators, washing machines, etc. An FTHS is two HSC's (top and bottom) of equal depth. The two thicknesses of fibreboard at sides and ends afford maximum protection to contents and superior stacking strength.

One Piece Folder—1PF

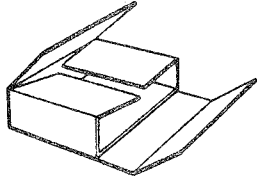

Tucks of specified length.

Corrugated Box Styles

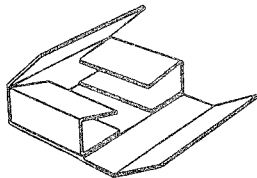

Two Piece Folder—2PF

Two scored sheets. Tucks of specified length.

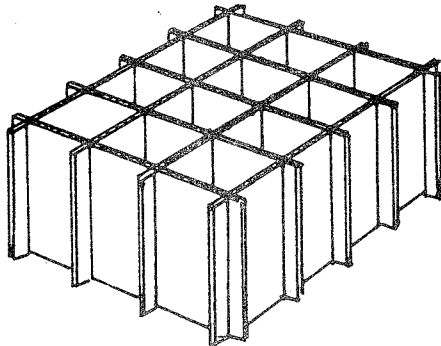

Three Piece Folder—3PF

Three scored sheets. Tucks of specified length. The various folders illustrated are all used principally for shipment of books, catalogues, wearing apparel and articles of similar nature which are shipped primarily by parcel post and express. Folders are easily stored, set up, packed and closed.

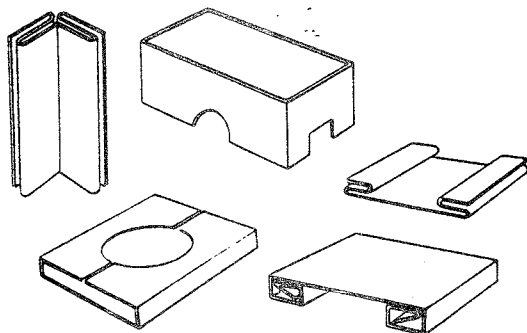

Partitions or Dividers

Partitions or dividers provide a separate cell for each article in a box and are used principally with fragile items. For extremely fragile items, the partitions can be constructed so as to provide an air space between the contents and the walls of the box.

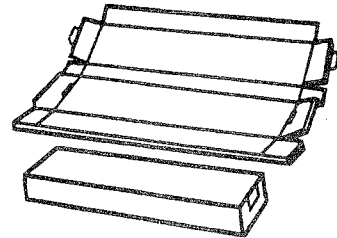

Inner Packing Forms

Corrugated fiberboard inner packing forms take many shapes which are limited only by the need for protection, the nature of the contents, and the ingenuity of the designer. They anchor the article with the box, and cushion and protect fragile articles from damage resulting from external and internal forces.

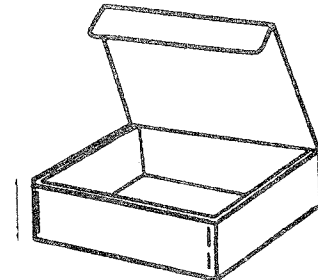

Five Panel Folder

A very economical and easy to use package. Ideal for long thin objects. Long folders may be easily cut down to fit shorter objects.

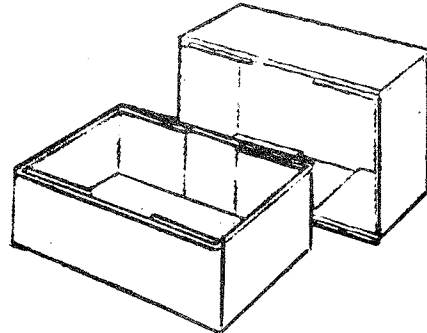

Rolled End Tuck Top

A rolled end tuck top is a suitable container for packaging small items and/or gifts. It stores flat and is self locking in set up.

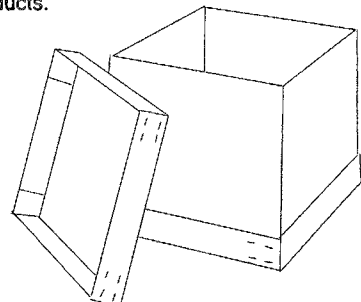

Full Telescope Design Style

Top and bottom of equal depth, usually shallow. Provides good side wall strength for stacking. Ideal for opening and closing and re-using. Also can be made with partial telescoping top.

Double Cover Box (DC)

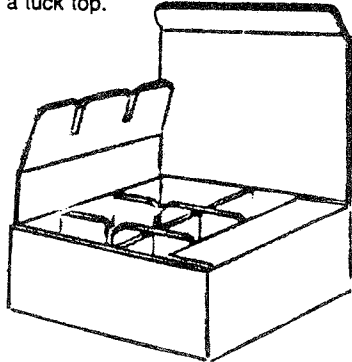

For articles which cannot be readily packed in standard containers because of height or weight or because the quantity of articles to be shipped varies. If the units being packed do not fill the box, the body may be cut down to the level of the contents. This style of box is often used for the shipment of granular and other free-flowing products.

Displays

Form-A-Cell

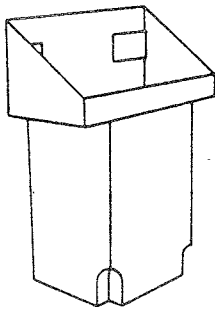

The form-a-cell is a unique alternative to the standard partition and carton packs. Manufactured in one piece, this carton assembles easily and closes with a tuck top.

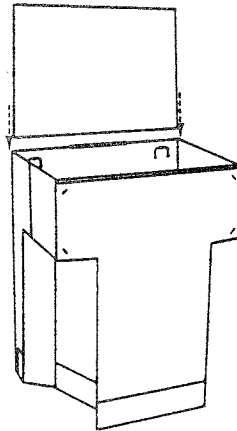

Corrugated Displays

We custom design corrugated displays to maximize the sales of your products. Whether a short run or a long run, you can count on Marfred for a competitive price. Following are a few of our most popular displays.

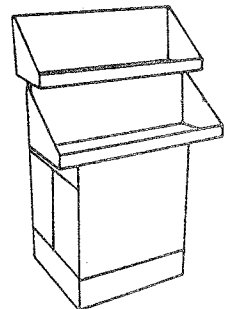

Tilt Table Dump Display

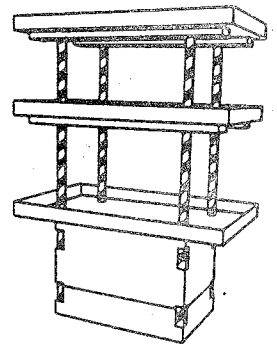

One-Piece Dump Display

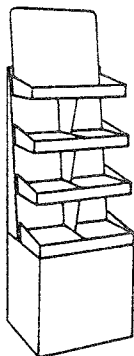

Two-Tray Step Up Display

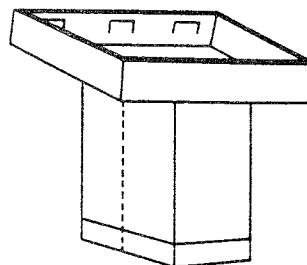

Island Display

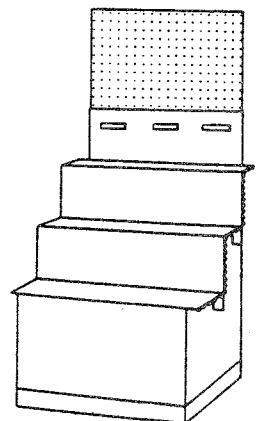

Four-Shelf Multi-Line Display

Dump Display

Three-Step

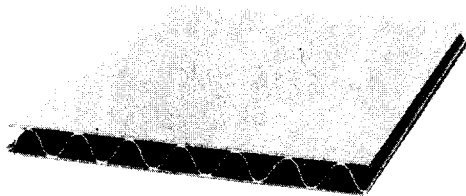

Please note all displays may be custom tailored and printed to suit our customers' personal requirements.

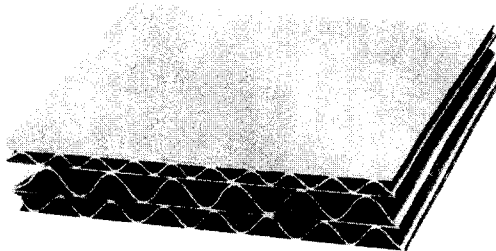

SHIPPING CONTAINERS, BOXES & MAILERS

TYPES OF CORRUGATED FIBERBOARD

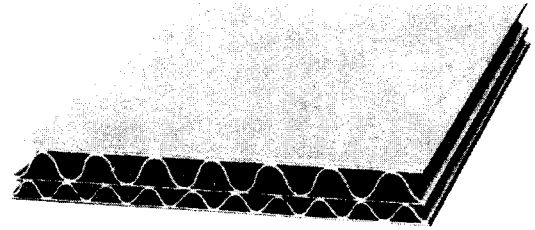

Shown here are the common types of corrugated fiberboard, their construction, characteristics and basic applications.

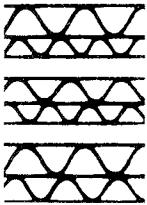

**SINGLE WALL CORRUGATED
(ALSO KNOWN AS DOUBLE FACED)**

TRIPLE WALL CORRUGATED

DOUBLE WALL CORRUGATED

<p>"A" FLUTE (drawn twice size) 3/16" approx.</p>  <p>CHARACTERISTICS: High top-to-bottom compression. Relatively low flat crush. Thickness gives good cushioning protection.</p> <p>APPLICATIONS: Furniture, appliances, inner packing of all kinds.</p>	<p>"B" FLUTE (drawn twice size) 1/8" approx.</p>  <p>CHARACTERISTICS: Has high resistance to crushing, which makes for excellent printing surface; slots and scores easily.</p> <p>APPLICATIONS: Canned goods, displays and all types of die-cut containers. Adapts easily to automatic folding and sealing equipment.</p>	<p>"C" FLUTE (drawn twice size) 5/32" approx.</p>  <p>CHARACTERISTICS: Greater resistance to flat crush than "A" or the older "C" flute. Excellent printing surface, with fewer high and low corrugations.</p> <p>"C" flute combines the best characteristics of "A" and "C" flutes.</p> <p>APPLICATIONS: Glass, furniture, dairy products, produce and appliances.</p>	<p>"E" FLUTE (drawn twice size) 1/16" approx.</p>  <p>CHARACTERISTICS: Almost twice the flat-crush strength of "B"; but substantially less top-to-bottom compression strength than "B". Printability is very comparable with folding boxboard, yet "E" flute has twice the stiffness.</p> <p>APPLICATIONS: Displays, backing boards for blister packs, self-serve merchandise, glass.</p>	<p>DOUBLE-WALL COMBINATIONS</p>  <p>CHARACTERISTICS: Double-wall board can be made in most any combination. Use when extra thickness and stacking strength is needed.</p> <p>APPLICATIONS: Heavy furniture, appliances, pallet-packs, interior parts, and partitions.</p>
--	--	---	--	--

DEFINITIONS

- Corrugated Board or Corrugated Fiberboard:**
The structure formed by gluing one or more sheets of fluted corrugating medium to one or more flat facings of linerboard.
There are four common types:
 - Single Face:** Combination of one fluted corrugating medium glued to one flat facing of linerboard.
 - Single Wall:** Two flat facings of linerboard, one glued to each side of a corrugated sheet. Also known as Double Face.
 - Double Wall:** Three flat facings of linerboard, with two interleaved and glued corrugated mediums.
 - Triple Wall:** Four flat facings of linerboard, with three interleaved and glued corrugated mediums.
- Corrugated Medium:** A sheet of corrugating material that has been softened with steam and pressed into the wave shape known as flutes.
- Corrugating Material or Corrugating Medium:**
The type of paperboard used in forming the fluted portion of corrugated board.
- Flute or Corrugation:** One of the wave shapes pressed into corrugated medium. Types and dimensions of flutes in common use are shown above.
- Flute (or Corrugation) Direction:** The normal direction of flutes is parallel to the depth of the box, so that they are vertical when the box is stacked for shipment. In end-opening and wrap-around box styles, the flute direction may be parallel to the length and width, resulting in a "horizontal corrugation box."
